Summary

Passionate about building scalable, maintainable applications using clean architecture and efficient algorithms. Skilled in debugging, refactoring, and writing production-level code with a creative, engineering-first approach to problem solving.

Education

Middle Tennessee State University, BS in Computer Science

Aug 2024 – May 2027

- GPA: 3.130/4.0

Experience

IT Support Assoc II, Amazon – Antioch, TN

May 2025 – current

- Developed a Python automation tool that processed device triage data and automatically generated support tickets, reducing manual processing time by 160% and improving workflow scalability across warehouse operations.
- Built and maintained tools to validate, analyze, and process inventory and device lifecycle data, supporting large-scale warehouse operations and improving data accuracy across triage and asset management processes.
- Collaborated with IT and operations teams to troubleshoot hardware and software issues, identify process bottlenecks, and implement technology-driven solutions that improved workflow reliability and reduced turnaround times.

Projects

Gesture-Controlled Pac-Man (Hackathon Project)

<https://github.com/AntoniousAmgad>

- Developed a Pac-Man game controlled entirely by hand gestures using Python and computer vision. Implemented real-time hand tracking with MediaPipe, mapped gestures to keyboard hotkeys, and optimized input logic to prevent repeated key spamming. Improved control accuracy by designing a dynamic gesture-centering algorithm, enabling reliable detection regardless of hand position in the camera frame.
- Tools Used: Python

Skills

Languages: C++, Python, C, Java, C#, SQL, JavaScript

Technologies: Django, .NET Framework, Microsoft SQL Server, XCode, Interface Builder, Microsoft products
